

SEPT Assignment Sprint Planning Notes

Team: 2

Sprint: 4

Date: 7 October 2020

Attended: Shreya, Stephanie, Catherine, Jeremy, Anthony

Scrum Master: Stephanie

Product Owner: Shreya

Development team: Shreya, Stephanie, Catherine, Jeremy, Anthony

1. Goal

Our goal is to have a functioning web application where customers can make bookings that exist, and which shows a landing page to display available services. We also want to ensure that the design of the application is consistent and that all forms have appropriate validation.

2. Duration of the sprint

1 week

3. What is the team's vision for this sprint?

Two of the user stories in this sprint (7&9) were carried over from the previous sprint as they were not completed in time. We have decided to add to user story 24 in order to improve the quality of the feature. The final user story 25 is a new user story addition which encompasses our enhancement feature.

Our potentially shippable product will be the final product as this is our final sprint. The product will be error free and will have a flowing functionality, where administrators can create workers, workers can create services, and customers can register and book those services.

4. Estimation in story points

7. For the user story "As a customer I want to be able to book an appointment, so that I can receive the services provided by the business at a specific date", the group has decided to assign 8 story points. This is different to the initial 40, as this has been carried over from the previous sprint and some of the work has already been completed.

9. For the user story, "As a customer I want to view days and times for available services, as well as who is working so that I can decide when to book an appointment", the team assigned it 8 story points because it is an important feature of the application. On the booking page, the services, worker, days and times will be displayed and users will only be able to make bookings from the displayed times and worker as well as only make a booking for an available day and time.

24. For the user story “As a new customer, I want to be able to key in my name, address, phone, username and password, so that I can create a customer account by myself”, the team initially assigned it 8 points, but for this sprint we decided to assigned it 1 point because we only need to fix the problem regarding the phone field.

25. The user story “As a customer I want to view the homepage so that I can see a landing page from which I can view available services before I log in or register.” has been given an estimated story point of 5. This is because the task only entails creating a new page and reusing code, and only altering small things so it is not very difficult.
